

## **ABSTRACT**

### **LOAD-CARRYING APPARATUS**

An apparatus for carrying loads on inclined surfaces, comprising a support surface adapted to fixedly support a load. An endless track is connected to the support surface and adapted to propel the apparatus on an inclined surface. A power source is provided for actuating the endless track. An anti-roll device is provided for increasing a length of the apparatus beyond the endless track in a direction of movement of the apparatus on the inclined surface to prevent an overturning of the apparatus when transporting loads.
